EMERGING INFECTIONS PROGRAM (EIP) sites improve public health by translating population-based surveillance and research activities into informed policy and public health practice. This work is also funded in part by resources appropriated to CDC to support its response to coronavirus disease 2019 (COVID-19).

The New Mexico EIP performs population-based surveillance for candidemia, *Clostridium difficile*, and resistant Gram-negative bacteria; develops and standardizes surveillance and outbreak response for foodborne infections; and conducts HAI and antibiotic use prevalence surveys.
